Introduction

Data Engineer with 4+ years of experience building modern data platforms using **Snowflake**, **dbt**, and **Airflow**. Experienced in designing scalable ELT pipelines, dimensional data models, and optimizing **Snowflake** workloads for analytics.

Skills

- SQL | Python | dbt | Snowflake | Apache Airflow | Git | GitHub | GitHub Actions
- Data Engineering | ETL/ELT Pipelines | Data Warehousing | Data Modeling | Workflow Orchestration | CI/CD
- Medallion Architecture | SCD Type 1 & Type 2 | Dimensional Modeling | Data Quality Testing | Batch Processing | Data Transformation

Experience

Data Engineer	Cognizant	Kolkata, India	07/2022 - Current
• Engineered and automated end-to-end ELT pipelines using dbt, Snowflake, and Airflow, supporting 10+ reporting use cases with batch and near real-time data across healthcare analytics workloads. • Streamlined dbt project architecture into staging, intermediate, and marts layers, driving a 25% reduction in data processing errors, improving query performance, and cutting analyst onboarding time by enabling self-serve data access. • Re-architected 15+ high-volume dbt models from full-refresh to incremental builds using MERGE logic and composite keys, reducing ETL pipeline execution time by 40% and stabilizing daily runs — directly lowering Snowflake compute costs. • Automated historical change tracking by implementing dbt snapshots for SCD Type 2 across 8+ source systems that overwrote data, eliminating manual reconciliation effort and enabling accurate downstream reporting for business stakeholders. • Automated repetitive SQL patterns by developing 20+ reusable dbt macros and Jinja templates for surrogate key generation, audit columns, and environment-specific logic, reducing boilerplate code by 30% and accelerating feature delivery across the engineering team. • Built a dbt testing framework (generic and custom tests) covering 50+ models, automating data quality checks that reduced downstream reporting incidents and improved data reliability for analytics consumers. • Optimized 20+ slow-running Snowflake queries through join restructuring, early filtering, and table clustering on high-cardinality columns, achieving a 40% reduction in average query execution time and measurable decrease in data scan volume. • Reduced Snowflake infrastructure costs by 30% through warehouse right-sizing, auto-suspend/resume policies, and FinOps tuning aligned to workload patterns — delivering direct cloud cost savings without impacting pipeline SLAs. • Designed star-schema dimensional models (fact and dimension tables) aligned to business reporting requirements, enabling self-serve analytics for stakeholders and reducing ad-hoc SQL requests from analyst teams. • Orchestrated production Airflow DAGs for dbt transformation and ingestion workflows with dependency management, automated retries, and backfill strategies, improving pipeline reliability and reducing on-call intervention on failures. • Integrated Snowflake with AWS (S3, Snowpipe, Lambda) to enable event-driven ingestion and near real-time data availability, automating data flows from cloud sources and eliminating manual load processes for critical datasets.			

Education

Bachelor of Technology	University of Engineering & Management, Kolkata	07/2018 – 07/2022
• Major in Electrical Engineering		

Certification

- **Microsoft Certified** : AZ900 Azure Fundamentals
- **AWS Certified** : CLF-C02 Cloud Practitioner
- **Snowflake University Badge** : Snowflake University Platform Skills Badge

Achievements

- Stakeholder alignment, Knowledge transfer, Solution development
- Client appreciation, Reliability improvements, Automation initiatives
